DETAILED ACTION

Drawings

1. The elements in Figs.1 and 8 need to have descriptive label, in conformance with 37 CFR 1.84(n) and 1.84(o). For example, a descriptive label of "computing unit" should be inserted into 102 in Fig.1 to properly describe the element.

Claim Objections

2. Claims 1-12 are objected to because of the following informalities:

In claims 1-10, the numbers in parenthesis are not required.

In claim 11, the claim is a method claim without any hardware involved wherein the steps of computing, establishing, determining and analyzing could be done mentally or on a piece of paper, thus could potentially be rejected under USC 101 as being directed to non-statutory subject matter. Hence, it is suggested to include a hardware, such as the computing means, establishing means, histogram determining means and analyzing means recited in claim 1.

In claim 12, line 1, "A computer program product to be loaded by a computer arrangement" is suggested to be amended, such as "A non-statutory computer readable medium when executed by a processor... in order to ensure that the claim is directed to statutory subject matter of hardware, and not software or signal, per se.

Appropriate correction is required.

Allowable Subject Matter

3. Claims 1-12 would be allowable if rewritten or amended to overcome the claim objections, set forth in this Office action.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Srivastava et al., Design of 2D-multiple Notch Filter and Its Application in Reducing Blocking Artifact from DCT Coded Image, IEEE, 2000, p.2829 – 2833, Rosenberg USP 5,832,115, Yang et al. US 2003/0206591 A1, and Tardif US 2002/0154700 A1 teach in a similar field of endeavor of a system and a method of detecting block artifacts and producing gradient values.

This application is in condition for allowance except for the following formal matters:

Claim objections.
